

Diploma in Advances in Medicine 2025 – 2026

12 January 2025 – 31 December 2026

Introduction

Advancements in medical management of diseases are being made at a remarkable pace. In order to benefit from them, doctors need to be constantly updated. This enhances their skill in caring for their patients. At the same time, many changes are taking place in different healthcare perspectives. Patients are better informed and have higher expectation. The general public has greater demand on the medical professionals. In response to this evolving medical dynamics, medical institutes have developed more regulatory requirements. This two-year Diploma programme in Advances in Medicine is an opportunity to achieve some of these goals. Through the programme, we will not only share the latest medical knowledge and state of art management, but will also establish the network sharing health responsibilities among the general public, patients, family doctors and specialists. In addition to exhibiting therapy for diseases, we will be moving towards preventive medicine and health enhancing management.

Admission Requirement

Candidates must have a Medical Science related degree or equivalent qualification.

Programme Design

The Diploma programme will commence on 12 January 2025 and be completed on 31 December 2026.
